

Growth & Efficiency Brainstorm

Practical website and IMS opportunities to save time, scale operations, improve efficiency, and win more clients.

Strategic feature roadmap

Executive overview

Boforg already has strong foundations across e-commerce, quotations and invoices, inventory, shipments, accounting, credit control, Paynow payments, and WhatsApp ordering. The next major opportunity is to connect these capabilities into automated, measurable workflows.

Best first investments: a CRM lead pipeline, automated quotation follow-ups, and one-click quote-to-invoice conversion. Together, these should deliver the fastest combination of more sales and less administration.

Highest-impact opportunities

Feature	Primary benefit	Priority
WhatsApp quotation generator	Turns enquiries into professional quotes in minutes	Very high
Lightweight CRM and lead pipeline	Prevents leads from being forgotten	Very high
Automated follow-ups	Improves quote and abandoned-cart conversion	Very high
Customer self-service portal	Reduces repetitive calls and messages	High
Inventory purchasing automation	Prevents stockouts and overstocking	High
Service and warranty management	Creates recurring revenue and improves support	High
SEO product and service pages	Generates more inbound leads	High
Management dashboard	Helps management act on real numbers	High

1. Turn the IMS into a lightweight CRM

Introduce a visual sales pipeline: New lead -> Contacted -> Qualified -> Quotation sent -> Negotiating -> Won/Lost.

- Store customer and company details, requested products or services, expected deal value, lead source, assigned salesperson, next follow-up date, notes, and communication history.
- Record why deals are lost so pricing, product availability, and sales processes can improve.
- Show a daily follow-ups-due dashboard and flag leads with no recent activity.
- Report conversion rates by salesperson, product category, campaign, and lead source.
- Automatically create leads from website forms, WhatsApp enquiries, and quote requests.

2. WhatsApp quotation workflow

Extend WhatsApp ordering into a complete enquiry-to-sale workflow.

- Allow customers to request a quote from a product page or cart.
- Create a draft quotation automatically in the IMS using the actual cart details.
- Generate a branded PDF quotation and a secure shareable link.
- Send the quotation link through a prepared WhatsApp message.
- Let staff adjust pricing or discounts and let customers accept or reject online.
- Convert accepted quotations into invoices or orders in one click.

3. Automated sales follow-ups

Use configurable reminders to ensure opportunities and receivables receive attention at the right time.

- Quote sent but not opened after 24 hours.
- Quote opened but not accepted after three days.
- Invoice approaching its due date or already overdue.
- Abandoned cart, with suitable customer consent.
- Customer has not purchased for 60 or 90 days.
- Previously unavailable product is back in stock.
- Warranty or service contract is about to expire.

Safe rollout

Start with messages queued for staff review. Automate only low-risk reminders after wording, timing, consent, and opt-out handling have been validated.

4. Customer self-service portal

Give customers a secure, convenient place to complete common tasks without calling or messaging staff.

- View and accept quotations.
- Download invoices and receipts.
- Pay outstanding invoices.
- Track order, collection, and delivery status.
- View payment history and reorder previous purchases.
- Submit support requests and check warranty status.
- Use secure magic-link access to avoid password friction.

5. Improve online lead generation

Make every high-intent website action easy to complete and measurable.

Product enquiry improvements

- Add Request Best Price, Check Availability, Talk to a Product Specialist, Compare Products, and Notify Me actions.
- Show related products, accessories, frequently asked questions, and recently viewed items.
- Record the page, product, campaign, and source responsible for each enquiry.

Dedicated service landing pages

- Business laptop supply and office network installation.
- CCTV installation, printer supply, and maintenance.
- Microsoft 365 setup and managed IT support.
- Website development, custom software, servers, and backup solutions.
- Include proof of work, FAQs, packages or indicative pricing, and a focused WhatsApp or quote action.

6. Build an SEO and content engine

Attract customers while they are researching a solution, not only after they already know Boforg.

- Create search-friendly product and service pages with structured data.
- Publish location-specific pages, technical buying guides, product comparisons, case studies, and FAQs.
- Generate XML sitemaps and maintain strong metadata and social-sharing images.
- Useful topics include business laptops for SMEs, CCTV installation costs, UPS sizing, printer selection, and IT maintenance checklists.

7. Automate purchasing and inventory decisions

Calculate recommended purchases using current stock, reservations, open orders, incoming shipments, supplier lead times, sales velocity, and minimum stock levels.

- Low-stock alerts and suggested purchase orders.
- Dead-stock alerts, stock ageing, and fast/slow-moving classifications.
- Demand forecasting and a products-likely-to-run-out-within-30-days report.
- Supplier price history and supplier delivery-performance scores.
- Margin warnings when landed or purchase costs increase.

8. Barcode and QR-code operations

Use phones or barcode scanners to speed up physical inventory work and reduce typing errors.

- Receive shipments and capture serial numbers.
- Run stock counts and transfer stock between locations.
- Look up products and serialised units instantly.
- Pick customer orders and confirm collections or deliveries.

9. Warranty, repairs, and support tickets

Build a service workflow around the system's existing serial-number tracking.

- Track warranty start and expiry dates.
- Create repair job cards with fault descriptions, diagnostics, assigned technician, parts used, and status.
- Attach before-and-after photos and preserve service history by serial number.
- Send automatic status notifications and issue repair quotations.
- Let customers scan a QR code to check warranty status or open a support ticket.

10. Create recurring revenue

Use the IMS to manage repeatable services and reduce dependence on one-off hardware sales.

- Monthly IT support, managed backups, cybersecurity monitoring, and Microsoft 365 administration.
- Website, CCTV, printer, and equipment maintenance plans.
- Contracts, recurrence schedules, automatic monthly invoices, renewal reminders, and technician assignments.
- Service-level tracking and contract profitability reporting.

11. Delivery and collection management

Introduce a fulfilment flow: Confirmed -> Preparing -> Ready for collection -> Dispatched -> Delivered.

- Send customer status notifications automatically.
- Assign drivers or couriers and store delivery details and fees.
- Capture proof-of-delivery photos or signatures.
- Use collection PINs and record failed-delivery reasons.

12. Pricing and profitability controls

Protect margins while giving sales staff flexible, controlled pricing tools.

- Minimum acceptable margins and approval workflows for large discounts.
- Customer-specific, wholesale, retail, and quantity-based pricing.
- Salesperson commission calculation and profit reporting by invoice, customer, and product.
- Landed-cost-aware prices, price history, quote expiry, and price-lock periods.
- Immediate warnings when a quotation falls below minimum margin.

13. Management dashboard

Design the dashboard around questions management needs answered every day.

- Revenue and gross profit today, this week, and this month.
- Quotations awaiting follow-up and invoices that are due or overdue.
- Products running out, ageing stock, and items that are not moving.
- Best customers, most profitable products, and most profitable services.
- Lead sources, sales conversion rates, cash position, and expected receipts over 7, 30, and 60 days.
- Scheduled daily or weekly management summaries.

14. Internal productivity improvements

Smaller improvements can remove substantial daily friction across departments.

- Global search across customers, products, invoices, quotations, and serial numbers.
- Saved filters, report presets, and bulk product price updates.
- CSV import with validation and a preview before changes are saved.
- Duplicate customer detection and reusable quotation templates.
- WhatsApp and email message templates.
- Keyboard shortcuts, activity timelines, audit logs, and document attachments.
- Role-based permissions, approval workflows, backups, and operational alerts.

Recommended implementation roadmap

Phase 1: Increase conversions

1. CRM lead pipeline
2. Quote requests from website and cart
3. Automated follow-up reminders
4. Online quotation acceptance
5. Lead-source and conversion tracking

Phase 2: Save staff time

1. Customer portal
2. Quote-to-order-to-invoice workflow
3. Delivery and collection statuses
4. Barcode and serial-number workflows
5. Purchasing recommendations

Phase 3: Create recurring revenue

1. Warranty and repairs
2. Support tickets
3. Maintenance contracts
4. Recurring billing
5. Renewal automation

Phase 4: Scale decision-making

1. Profitability dashboard
2. Demand forecasting
3. Salesperson metrics
4. Customer segmentation
5. Automated management reports

Start with the sales workflow. Connecting lead capture, quotation follow-up, acceptance, invoicing, and payment will create a measurable foundation for every later phase.
